

IN THE CLAIMS

Kindly amend Claims 20, 31, 37, 40, and 43 as follows:

E1
SUB
F1
5

20. (Four Times Amended) A camera comprising:
a camera body;
an imaging device to conduct a photographing
operation, wherein following a photographing operation
said imaging device outputs image information;
a first semiconductor memory [capable of storing
image information corresponding to at least two
photographic frames];
a second semiconductor memory;
10 a recorder which stores image information, output
from said imaging device, on one of the first
semiconductor memory and the second semiconductor
memory; and
a changer to [for automatically and] selectively
15 change [changing] between a first condition, in which
image information outputted from said imaging device is
stored on said first semiconductor memory, and a second
condition, in which image information outputted from
said imaging device is stored on said second
20 semiconductor memory based on a detected condition of
one of the first semiconductor memory or the second
semiconductor memory.

E2
SUB
F2
5

31. (Twice Amended) An editing device for a
camera capable of receiving a memory card, in which the
camera processes original image information obtained in
a photographing operation in a manner suitable for
storage and further stores such processed image
information on the memory card, the editing device
comprising:

CONT
E2

a first reception unit to receive [for receiving]
a removable memory card;

10 a second reception unit to receive a memory device
[for receiving an optical disc];

a signal processor to restore processed image
information, stored on the memory card, to original
image information obtained in a photographing
operation; and

15 a recorder to record the restored original image
information on the memory device [optical disc].

E3

37. (Twice Amended) An editing device according
to Claim 31, which further comprises a reading device
to read image information from the memory device
[optical disc].

E4

40. (Thrice Amended) A camera comprising:
a camera body;

an imaging device to conduct a photographing
operation, wherein following a photographing operation
said imaging device outputs image information;

5 a first memory [capable of storing image
information corresponding to at least two photographic
frames];

a second memory;

10 a recording device to store image information on
one of the first memory and the second memory;

a first changer to [automatically and] selectively
change between a first condition, in which image
information outputted from said imaging device is
15 stored on the first memory, and a second condition, in
which image information outputted from said imaging
device is stored on the second memory;

a reproduction device to receive and reproduce
image information stored on and outputted from one of
20 the first memory and the second memory; and

CONT
E4

CONCL-
SUB
F3 } 25

a second changer to selectively change between a third condition, in which image information stored on said first memory is output from said first memory to the reproduction device for reproduction, and a fourth condition, in which image information stored on said second memory is output from said second memory to the reproduction device for reproduction.

E5

SUB
F4 } 5

43. (Twice Amended) A camera comprising:

a camera body;

an imaging device to conduct a photographing operation, wherein following a photographing operation said imaging device outputs image information;

a first SRAM memory capable of storing image information corresponding to at least two photographic frames;

a second SRAM memory, wherein at least one of said first SRAM memory and the second SRAM memory being provided in the camera body;

a recording device provided within the camera body for selectively storing image information on one of the first SRAM memory and the second SRAM memory; and

a changer provided within the camera body for causing said recording device to selectively change from a first condition, in which image information outputted from said imaging device is stored on the first SRAM memory, and a second condition, in which image information outputted from said imaging device is stored on the second SRAM memory based on a detected condition of one of the first SRAM memory and the second SRAM memory.

REMARKS

Claims 20-25 and 31-46 are pending in this matter. By this Amendment, Applicants are submitting amendments
